Safety Review Brochure assignment

Name _____

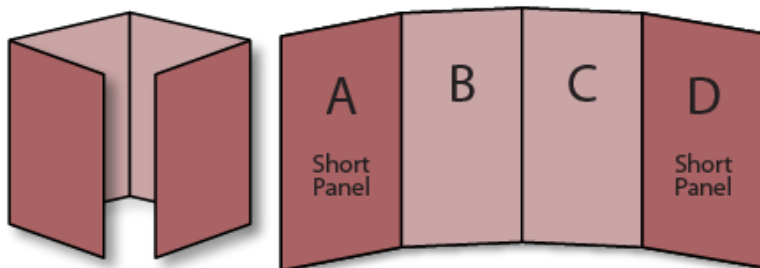

Date _____

Block _____

Your job is to produce a brochure explaining the most important safety rules and equipment for a new student to our school.

You will use one 8 ½ by 17 sheet of paper. You will fold it as follows:

- 1) Fold it in 1/2 (short sides together) and open it
- 2) Fold each side in to the center and then close the brochure along the first fold line.

On the first page – when the brochure is closed, you will put a ‘title page’ – colorful and welcoming.

When you open the brochure, the inside flaps should have 6 safety rules that you think are most important.

- Clearly stated/illustrated
- Reasons for the rule – why it is important – consequences of not following it?

When you open the inside flaps, there should be a good description of safety equipment found in the lab

- Where in the lab to find it
- How to use it

This can take the form of a map and/or descriptions, as long as they are clear.

Equipment that must be included:

- Fire Extinguishers (all 3 of them)
- Fire Blanket
- Eyewash/showers (both of them)
- Fume hoods
- Broken glass container
- Emergency Gas Stops (both of them)
- Gas taps on tables (explain safe use of them)
- Spill kits
- Aprons
- Goggles
- Fire alarms (where they are in relation to the lab)

This project must be neat, colorful, detailed, and show good understanding of the principles of safety and equipment use. It must be presented in an interesting and clear way that a grade 8 would be able to understand it. See attached rubric for more details.
